Fusarium

A genus of mold which can be found within indoor environments. Certain species are pathogenic (harmful to human health) and cause severe sickness to those who are affected.

Clinical Information

- Fusarium causes extremely dangerous skin infections. The symptoms are similar in appearance to Strep A, the "flesh eating" bacteria. Many experts compare the symptoms to that of leprosy.
- Ulcerations or infections of the face, hands, and body are very graphic. Once infected, most persons stay bed ridden for a considerable period.
- Can further debilitate the immune system of people with suppressed immune systems.
- Preliminary analysis reveals that Fusarium has been linked to impotence.

Here are some simple actions you can take to reduce energy costs, improve comfort, and reduce air pollution in your home or other building:

1. Use a powered exhaust system on any device that burns fuel indoors.
2. Eliminate the need for air leakage through your home's building envelope by using [mechanical ventilation](#) to supply as much fresh filtered air as you want.
3. [Seal air leaks](#) in the building's envelope to block entry of microbes, allergens, toxins, irritants, insects, and cold drafts.
4. [Insulate the walls and attic](#) as much, or more than, recommended for your local climate.
5. [Control indoor air pressure](#) to:
 - a) Minimize entry of radon and water vapor from the soil.

b) Keep insulation effective and mold-free by minimizing leakage of moist air through walls and attics that have been cooled by winter weather..

These actions will make your home a [safer shelter](#) if an accident, or a terrorist, releases chemical, biological or radiological substances upwind of your home.

Will additional energy price increases be *serious, certain and soon?* To examine the evidence, go to:
